

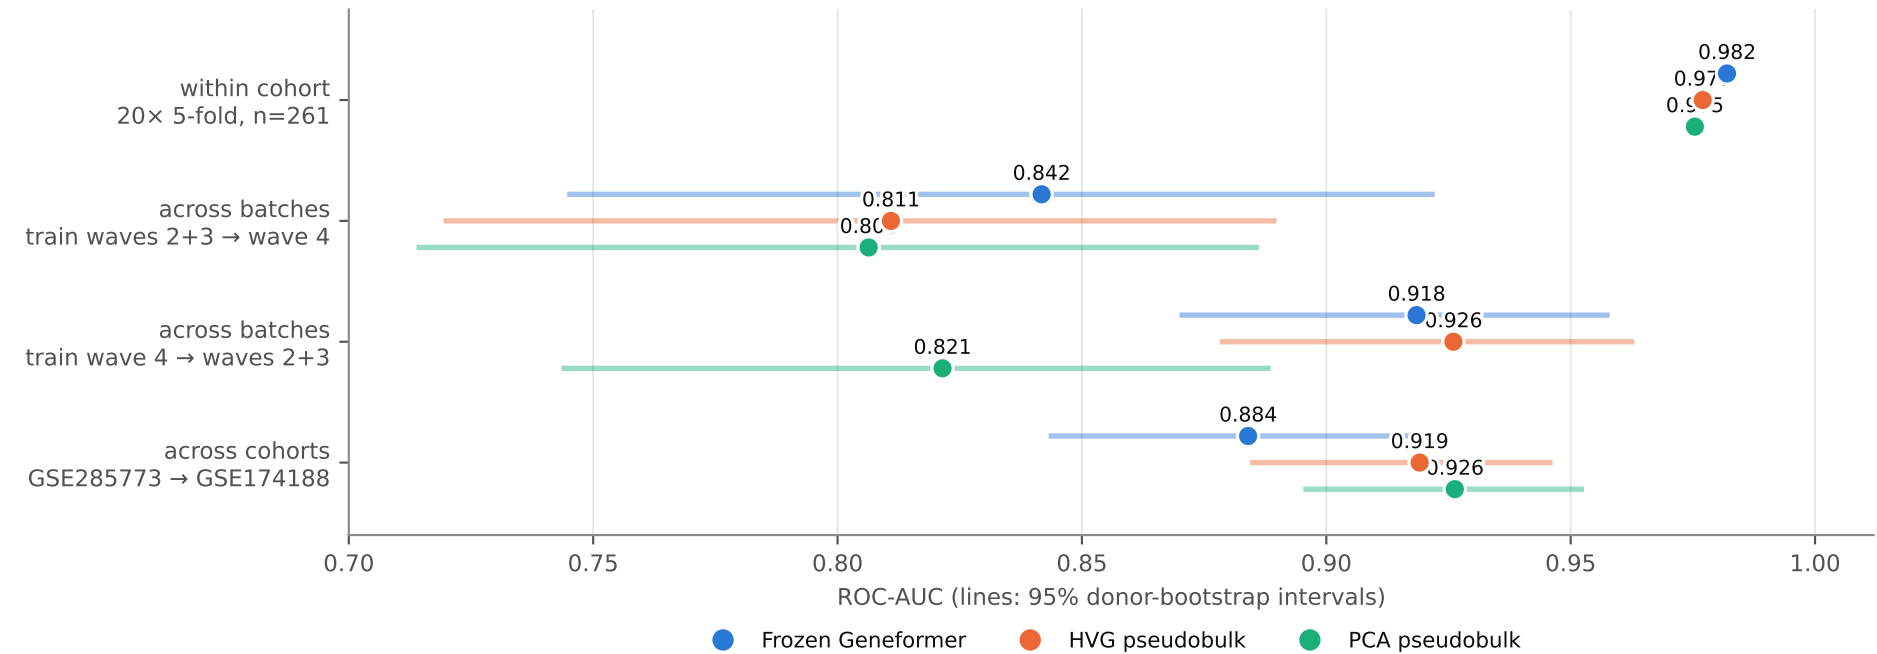

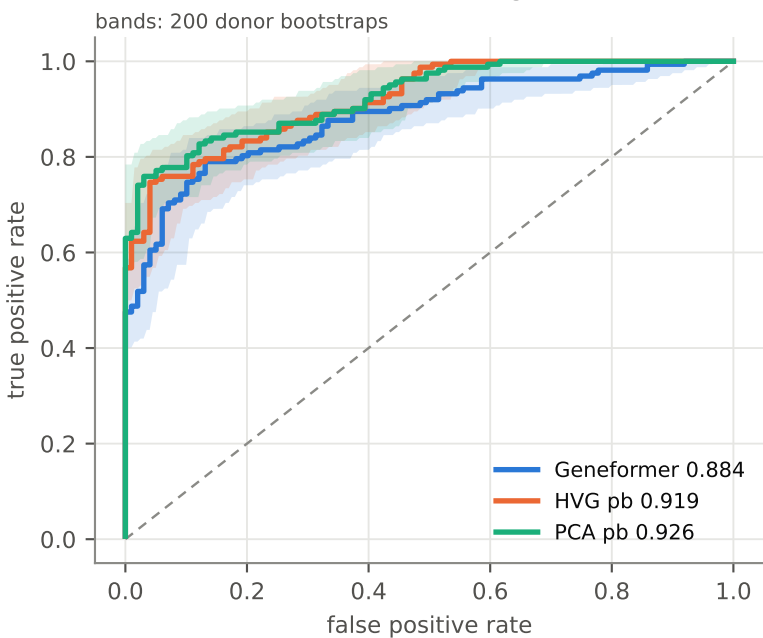

Figure 5 Generalisation, not internal separability, is where donor-level models break

A Generalisation fails at every level

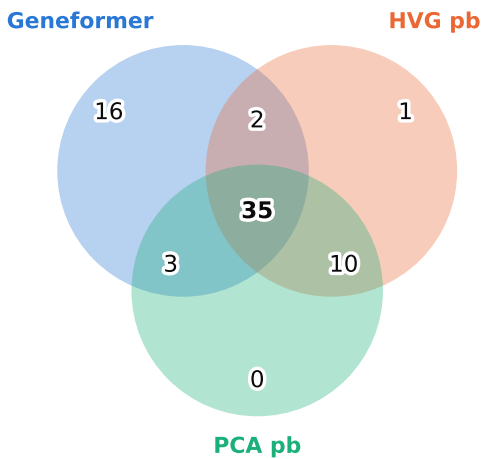

B Cross-cohort ROC, 261 target donors

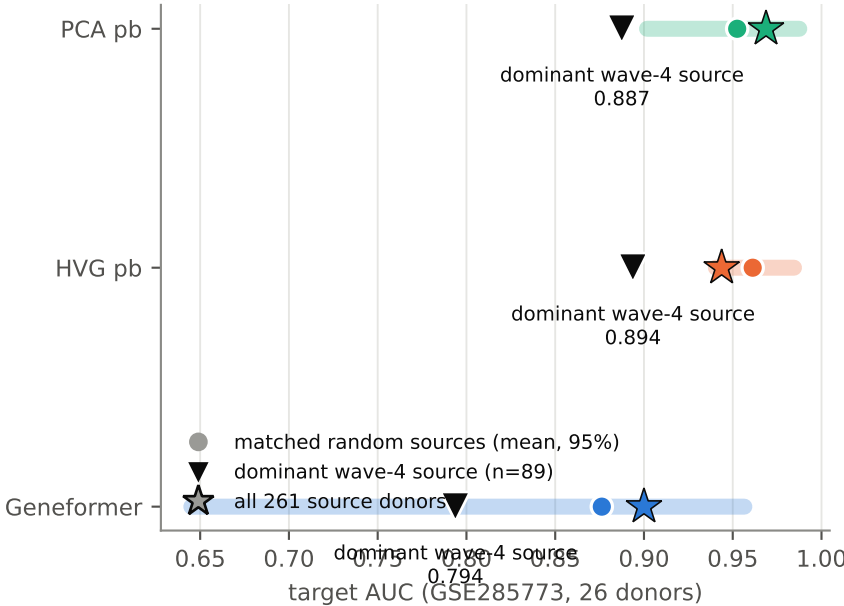

C The same donors fail for every representation

misranked target donors (score on the wrong side of prevalence)

D Restricting the source to dominant wave 4 makes transfer worse

percentiles 10% / 0% / 5%

E What moving outward costs
